

Our clients / Key projects

Prysmian Cable & Systems Ltd (formerly Pirelli Cables – HV Systems Ltd)

Turnkey operation undertaken involving excavation and cabling installation works to upgrade cables to the National Grid Sub Station.

East Lancs Rd 132kV Dual Circuit consisted of the diversion of 2 no. 132 kV oil filled CCTS due to proposed Tram System. This was a full turnkey operation undertaken to excavate and install 6 no. cables for a distance of 1km working within the live Sub Station and A 568 Dual Carriageway.

Scope of work included deep excavations up to 5.0m constructing transition joint bays and oil bund pits, constructing a duct block on existing bridge structure and resurfacing approx. 1500m² of SMA carriageway.

Other Pirelli projects included Liverpool 33kV works and Kirkstall C Sub Station deployment. Excavation and duct installation, Bentonite and cable pull of 33 kV from Kirkstall C to B Substations

33kV and 132kV Regeneration works at Kirkstall C Sub Station, Leeds.
